Statistics Service

### ACKNOWLEDGMENT

This publication summarizes basic information concerning Florida's poultry industry. It is intended for the use of poultrymen, allied industries, and all others who are interested in poultry production.

Many producers, hatcherymen, marketing agencies, and others voluntarily supplied information used to develop these statistics. Their cooperation is sincerely appreciated.

This summary is made possible through a cooperative effort of the Florida Agricultural Statistics Service and the Market News Section, Division of Marketing. Production and inventory data are official State and USDA statistics prepared by the Florida Agricultural Statistics Service.

## Poultry and Egg Summary

### Value

Florida egg production was valued at \$121.9 million, up 29 percent from the previous year and the highest since 1984. The 1989 annual average price of 56.2 cents per dozen was 15.1 cents more than in 1988 and was the second highest in over fifteen years.

The value of broilers produced in Florida during 1989 totaled a record high \$181.6 million, up 16 percent from the previous record established a year earlier. Prices in 1989 averaged 35.0 cents per pound, up 4.0 cents from 1988 and the highest since 1948.

The value of sales from Florida chickens (excluding broilers) was \$3.3 million, up 38 percent from a year ago. Prices during 1989 averaged 14.4 cents per pound compared to 10 cents per pound the previous year.

### Inventory

Broilers raised during 1989 totaled 123.6 million birds, up just slightly from a year earlier, and continuing an upward trend of the past several years. Layer numbers during 1989 averaged 10.7 million, down 4 percent from the average of a year earlier.

### Production

Florida broiler production in 1989 totaled 518,960,000 pounds, up 3 percent from 1988. Average bird size, at 4.2 pounds, was up 0.1 pound from a year earlier.

Egg production totaled 2,602 million, down 6 percent from 1988. Eggs per layer averaged 244 during 1989, a decrease of 4 eggs from a year earlier and the lowest since 1981.

Commercial hatcheries produced 157.5 million straight run chicks in 1989, down 5 percent from 1988. Broiler-type chicks accounted for 84 percent of the total and egg-type, 16 percent.

### Terms and Definitions

**MARKETING YEAR**--Poultry production, price, and value statistics since 1970 are for the marketing year beginning December 1 through November 30. All statistics prior to 1970 are on a calendar year basis. For comparability, in those tables where monthly data are shown, December entries always refer to the preceding year. All hatch and hatchery placement data are reported on a calendar year basis.

**BROILERS** are meat-type chickens raised commercially and usually marketed around 7 weeks of age.

**EGGS** include both table and hatching eggs. Market egg prices are calculated on a farm basis, cases exchanged. They include all grades and sizes, but exclude charges for hauling, grading or packaging. Prices for hatching eggs are not published separately. Annual egg production, price, and value statistics are for table and hatching eggs combined.

**OTHER POULTRY** cash receipts include chickens other than broilers, turkeys, and miscellaneous farm poultry.

**CASH RECEIPTS** are the returns received by farmers for all sales. This series was discontinued beginning with 1985.

**GROSS INCOME** includes cash receipts plus the value of home consumption.

**CURRENT YEAR** data are preliminary and subject to revision.

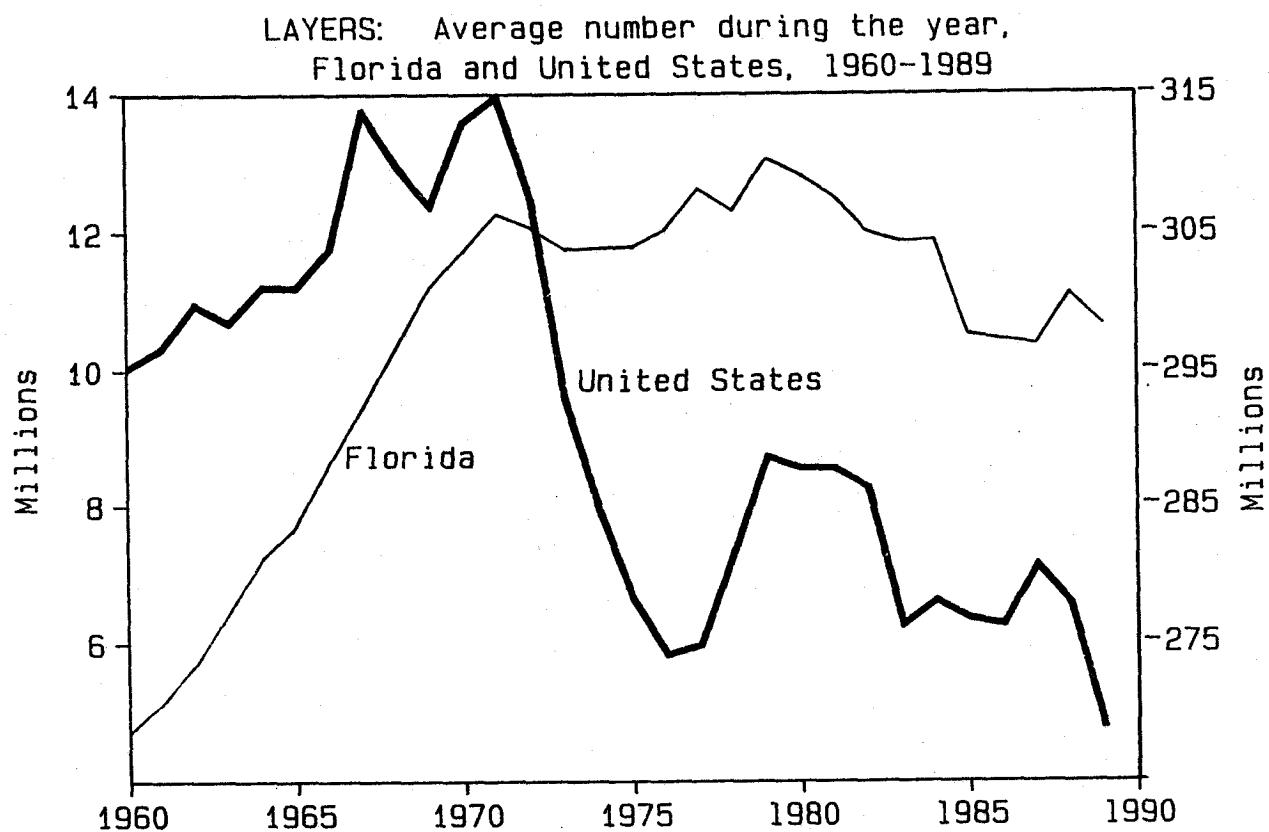

**SURVEY METHODOLOGY**--Estimates for hens and pullets of laying age, pullets not yet of laying age, and of egg production are based upon data obtained from a sample of commercial chicken and egg producers. This sample is selected from the universe of Florida poultry management units, and includes approximately 80 percent of the total commercial laying flock. Estimates are expected to be within five percent of the value obtained if a complete enumeration were undertaken each month.

During December of each year all known commercial egg producers in Florida are contacted. This complete enumeration establishes the annual universe of management units. Management units include all independent producers as well as contractors who report for all contractees.

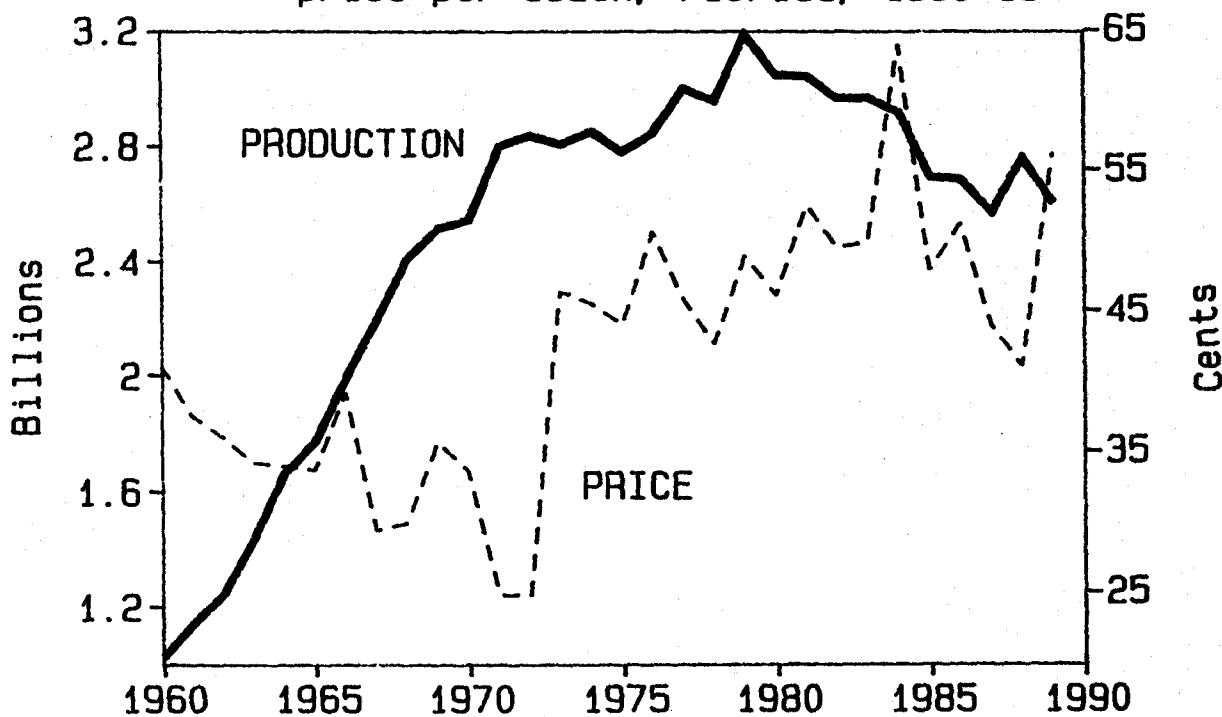

**Chickens and eggs: Value of production, Florida, 1975-1989**

| Year             | Product  |         |                   | Total   |
